

New Website desing.

The following page is what a user will see when they visit tickthebucket.org

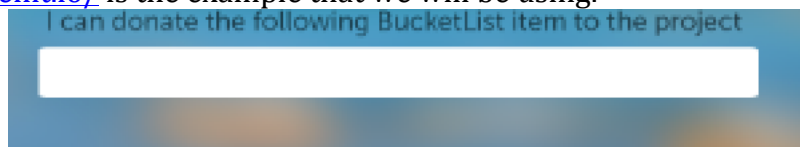

The screenshot shows the 'WELCOME to the TickTheBucket PROJECT' page. It features a background image of a person with arms raised. The page includes a 'How it works' button in the top right. The main form asks the user to 'Name five BucketList items you've always wanted to do' with five numbered input fields. Below this is a section for donating a BucketList item to the project, with a single input field. At the bottom, there are three input fields for 'My name is', 'My email is', and 'My phone number is', followed by a 'Submit' button.

As a user sees the page, it will be auto-filling the first text box with Bucket-list item suggestions:

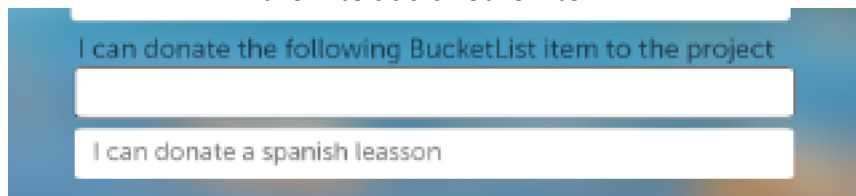

This close-up shows the first two input fields of the 'Name five BucketList items you've always wanted to do' section. The first field is pre-filled with the suggestion '1. Swim with dolphins'. The second field is empty and labeled '2.'.

<https://seenit.io/> is the example that we will be using.

This close-up shows the input field for donating a BucketList item to the project. The label 'I can donate the following BucketList item to the project' is visible above the empty text box.

When a user fills in this box and presses enter another box will appear and allow them to add another item.

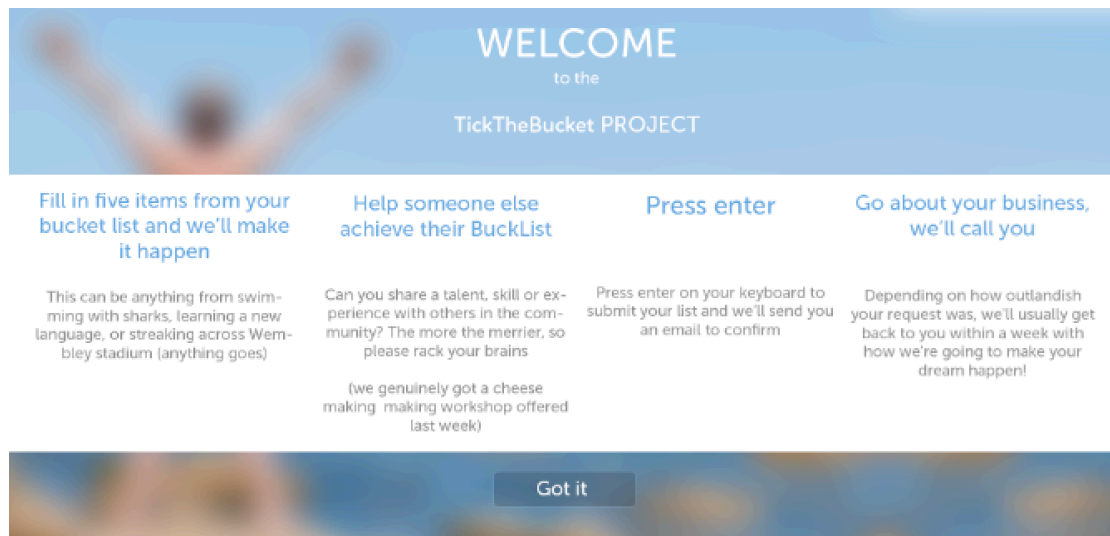

This close-up shows the donation section after one item has been added. The first input field contains the text 'I can donate a spanish leasson'. A second, empty input field has appeared below it, indicating that the user can add multiple items.

Mouse over buttons:

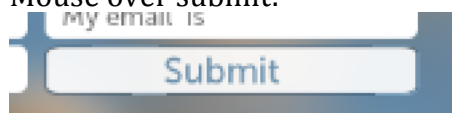

This is the how it works page. I am hoping the form can fade out and this can fade in

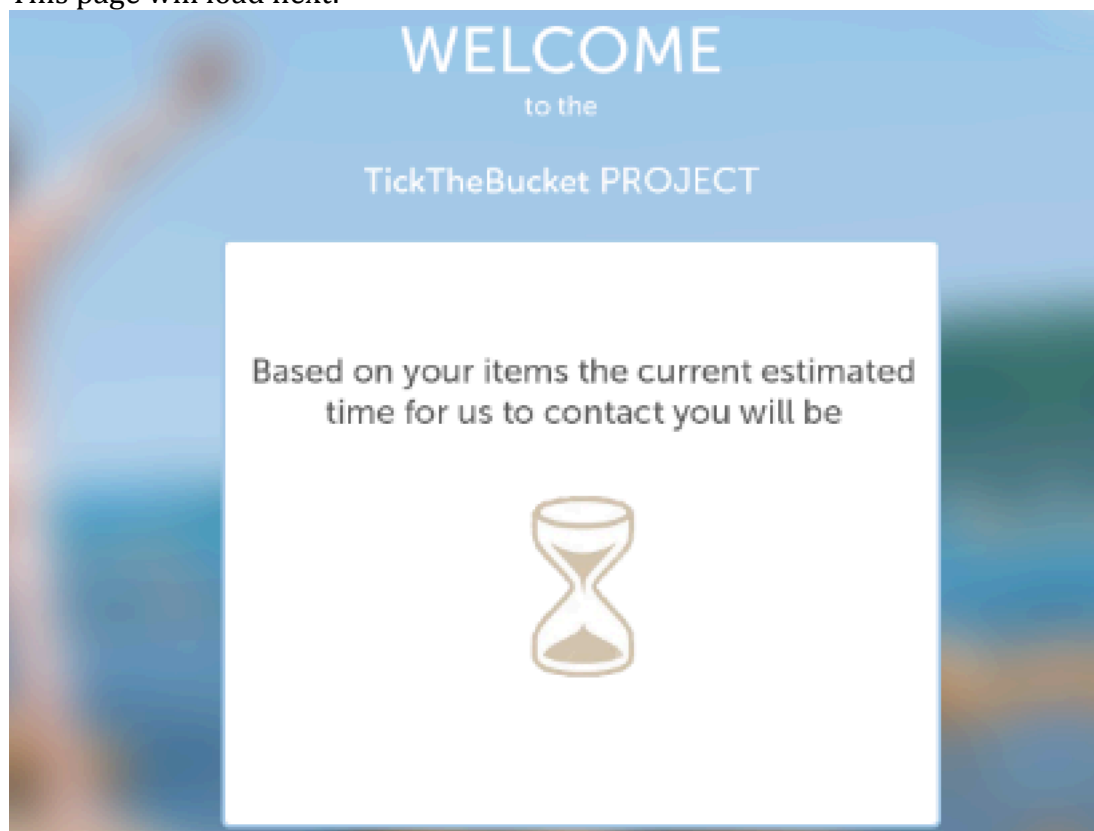

The got it button will do the same at the other buttons for a mouse over.
All the buttons should do the same

Mouse over submit:

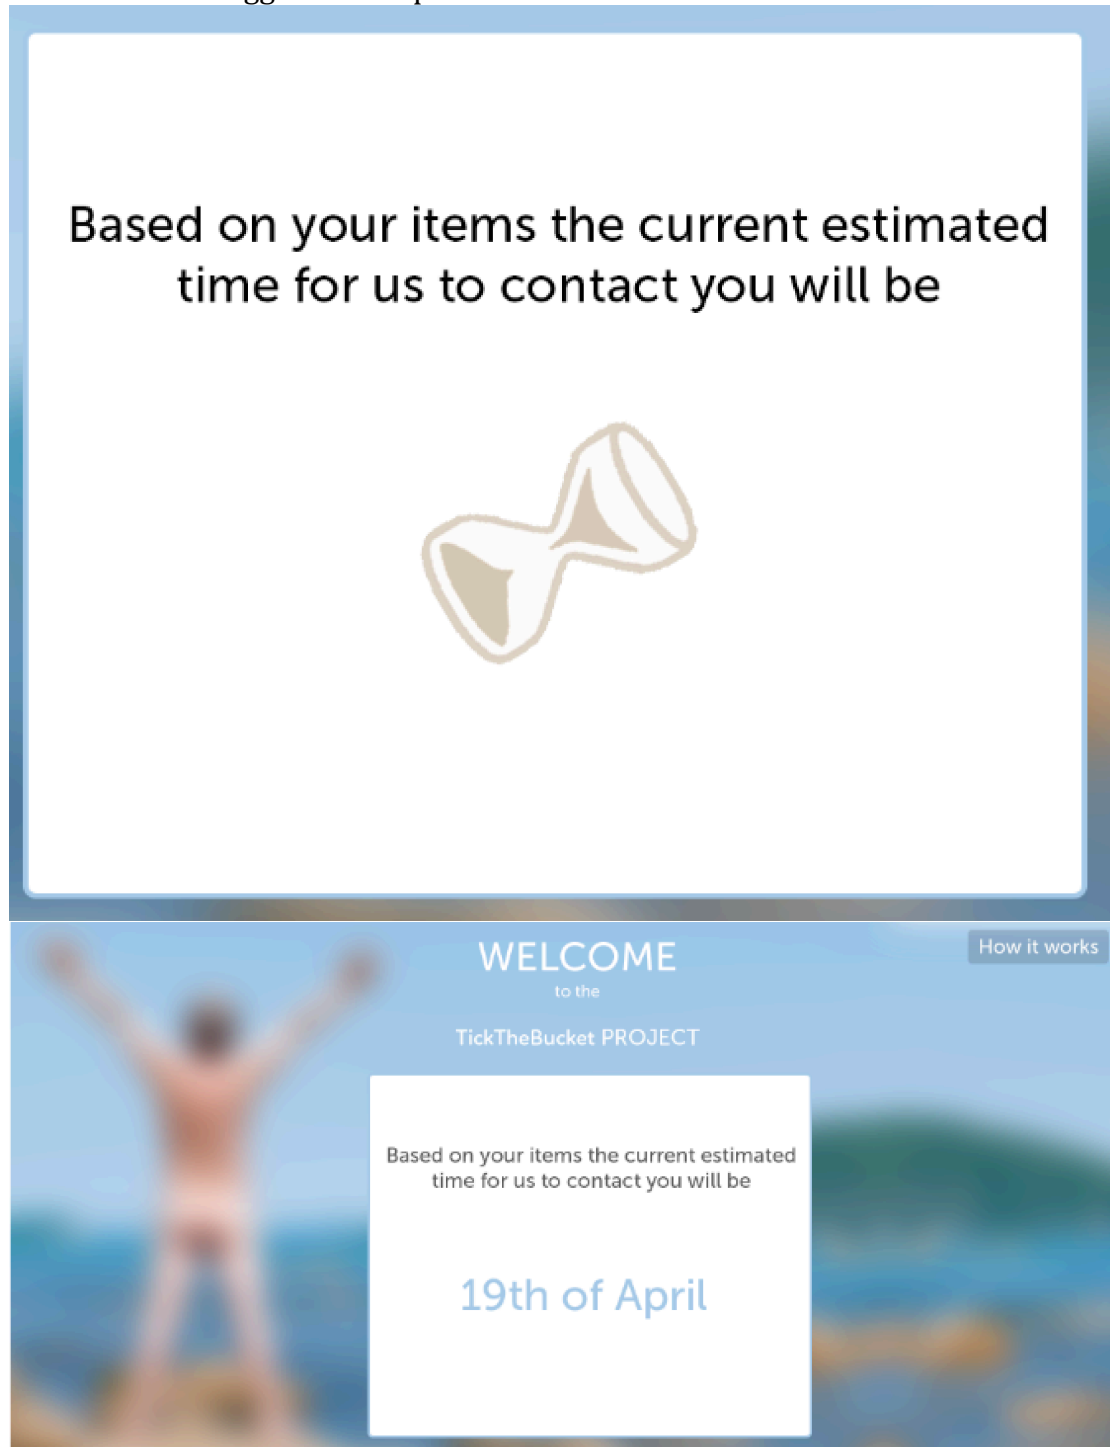

White back ground, blue text matching the surrounding area. 1pt blue outline.

This page will load next:

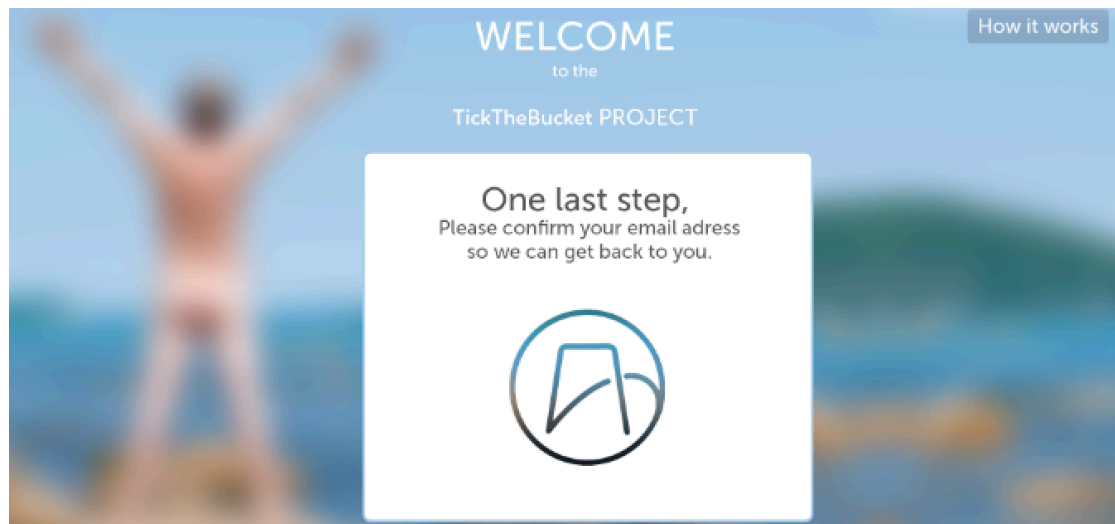

I would like the egg timer to spin for four seconds.

The date will show in blue for 3 seconds.

This page will show for five seconds:

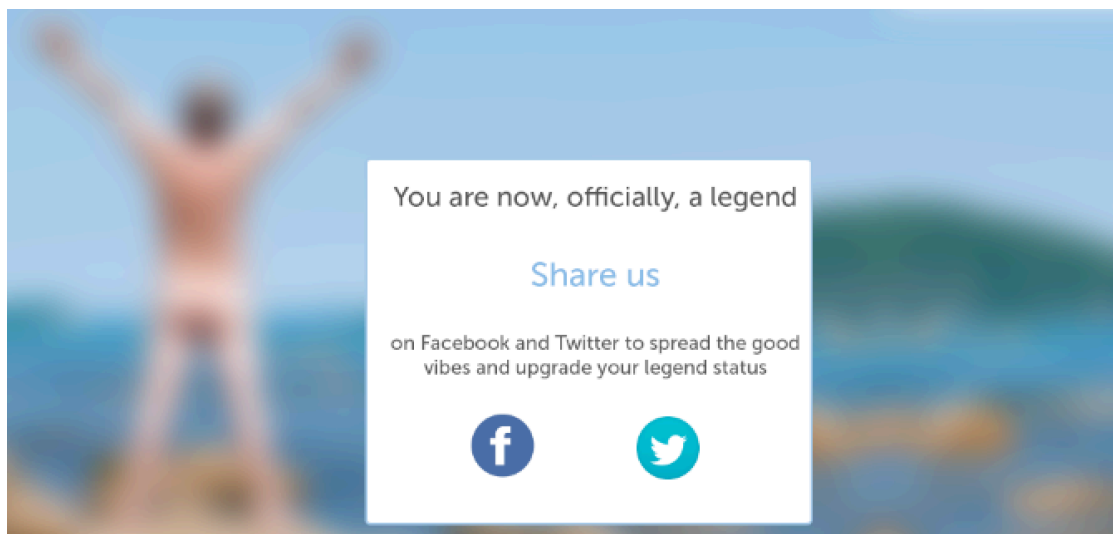

I've used a Gaussian Blur to so that the edges of the fade are not too strong.

As it waits for a person to confirm there email the logo turns more black.

Next this page will load after 5 seconds

Both of these buttons should, when clicked create a share form for Facebook and Twitter
